

Submission to the draft assessment criteria for Bell Bay Wind Farm.

Thank you for this opportunity to make a submission on the draft assessment criteria.

I note that the assessment criteria for 3.1 *land use compatibility*, has one mention of agriculture use. I consider that the sole reference of “(b) *has an acceptable level of compatibility with: (i) existing and potential agricultural uses;*”, is somewhat ambiguous.

While I am not suggesting that agricultural values should receive its own set assessment criteria, I do consider that a criteria that specifies the location of the development infrastructure adjacent to existing infrastructure where reasonably practicable to preserve the future agricultural use, would be suitable for this development.

Regards, Winston Archer.
